

TESLA'S WIRELESS PATENTS.

**Lists Them as Answer to Report That
His Tower Is to be Sold for Debt.**

To the Editor of The New York Times:

As bearing intimately on the report in your issue of even date that my tower is to be sold for \$199.31 on Dec. 9 which, to use Mark Twain's phrase, is "greatly exaggerated," your readers might be interested to know that, among others, the following patents on the wireless transmission, transformation and utilization of energy have been granted to me in the United States: Nos. 568,176, 568,178, 568,179, 568,180, 577,670, 645,576, 649,621, 685,953, 685,954, 723,188, 725,605, 787,412.

These documents, most carefully drawn with the assistance of some of the ablest attorneys, set forth clearly my fundamental discoveries on which this novel art is based, and give a faithful description of my processes, apparatus and experiments, thus enabling experts not only to flash telegraphic and telephonic wireless messages to any distance, but also to transmit power in unlimited amounts and with the highest economy.

Copies of these specifications can be readily obtained by addressing a courteous request to the Hon. Commissioner of the Patent Office, Washington, D. C., inclosing \$1.20 of postage stamps.

NIKOLA TESLA.
